

RAU helps you work your animals easily, safely.

"It aint' the 'Cowboy Way' but it's 'Our Way' now! Whether we used it on cattle in a chute or on the ground, every procedure was completed with no injury to the animal or the cowboys - and in record time. The RAU 2000 has way over paid for itself in labor and injury saving in just one season."... Ranch Owner, New Mexico

"About 100 vendors peddled thousands of farm products.....among the items buzzing with consumer interest was the RAU Animal Immobilizer.." – The Oklahoman, Sunday Dec 19 2004.

The RAU Animal Immobilizer is generating a great deal of interest among cattle folk, as evidenced by the above comments. The reason is quite simple – **it holds the animal still!** This means that workers can do what they have to do - quickly, safely and with more care! Its portability increases its value as it can be kept in a vehicle ready to use at any time - for planned or emergency activities.

Are you tired of fighting your animals? Have you ever been kicked or stamped on? Do you wish your animals would stand still as you work on them? Do you work your animals yourself? Are you pressed for time and want to work faster and safer? Would you like to reduce stress in your animals and yourself?

If you answered YES to any of these questions – the RAU Animal Immobilizer is for you!

Working with large animals is always a risky business and any way to reduce the danger and chance of injury to both animal and handler whilst reducing stress to both, definitely deserves a closer look. Stress can cause weight loss in an animal - it could take weeks to recover that weight. During that time a stress free animal could be adding weight instead of recovering lost weight. That lost weight may just make the difference between a profit and a loss!

"The RAU Immobilizer improves worker safety and reduces handler and animal stress by holding animals still without expensive squeeze chutes or head-gates.

Hot branding without a squeeze chute or head gate

It appeals to a complete spectrum of users including veterinarians, ranchers, breeders, part time cattlemen – male and female, old and young. Experienced cowmen are admiring its revolutionary ability to make it easier to get the job done with fewer injuries to worker and animal. This tool is revolutionizing animal handling during branding, dehorning, castration, pink eye injections, hoof-work, putting a calf to a cow, working with longhorns, semen collection, AI work and a number of other tasks” comments Ron Duckworth, Operations Manager at I & G Distributors USA.

Dangerous longhorn head examination made easy

Eye examination made easy

The IM 2000 Animal Immobilizer is light, comes in a handy carry bag for convenient transportation and the control unit recharges from the cigar lighter in a vehicle so it can be ready for instant use for 8 – 10 hours work whenever it's needed! Its additional optional accessories are a smaller Mini-probe and an Ejaculator probe for semen collection.

Priced at \$795-00 with a three year parts and labor warranty (excl battery) this product is a must have item which will earn its keep in no time at all.
