

Cattlemen & Vets know a good thing when they see it!

“When people ask me how I work my cattle so easily and quickly – I recommend the RAU IM2000 Animal Immobilizer because nothing works like it.” says Steve Flickinger of Gilbreath Enterprises AR.

“I can't believe how well the Immobilizer works. We have used nosers, ropes, medicines, & many other time proven techniques in restraining large animals but nothing has worked like the RAU Animal Immobilizer. It's another tool to incorporate in the time proven techniques to reduce injury to our cowboys and to decrease the stress to our animals !!! We are a large Angus Seedstock Ranch located in Arkansas and will utilize and promote this product.”

Testimonials such as Steve's are common as cattlemen and vets discover how they can have the revolutionary RAU IM2000 Animal Immobilizer in their toolkit to help them get their work done quickly and safely with no negative effects on their animals **for less than a dollar a day!**

The single biggest challenge is convincing people that this revolutionary equipment can deliver such amazing results so effectively and so safely. Yet - when they see it in use, they just can't believe their eyes when they see how fast it works and that it is able to immobilize a large animal completely without the need for a squeeze-chute or head clamp.

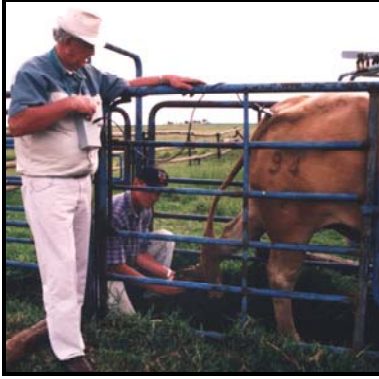

Once they have purchased their own Immobilizer, some customers are our best sales people because they just can't wait to show it to their friends. Some of the **real benefits** they are enjoying with their purchase include:

- Improved safety – because the animal is still and not trying to escape all the time
- No need to buy squeeze chutes or head-gates – means money in the bank
- Reduced outlay on medicines and vet bills to sedate animals – means money in the bank
- Faster working time – no more thrashing about
- Savings on medical bills – because of the lower risk of injury – means money in the bank
- Better quality of work – because the animal is still, procedures can be properly performed and completed
- Less stress to themselves and their animals – no weight loss due to stress means more money in the bank at sale time
- Fewer assistants needed to work animals – most procedures can be done single handedly so savings on wages - means money in the bank on payday
- No hassle 3 year warranty – means money in the bank if it stops working
- Risk free purchase – RAU offers a 30 day money back guarantee

It is obvious how easy it is to justify the cost of the RAU Animal Immobilizer – as some would say: “It's a no-brainer! This incredible piece of equipment pays for itself in no time at all!”

While working large or small animals the role of the RAU IM 2000 Animal Immobilizer is quite simply - "to hold the animal still - so the handler can work safely without injury to himself or to the animal."

Inserting the slender aluminum probe into the animal's rectal cavity and applying a low frequency electronic pulse, by turning the pulse regulator dial to the desired level, results in immediate immobilization. Then it is quick and easy to carry out the tasks that form part of the cattleman's or cattlemaster's daily or seasonal routine - with no kicking, stomping, butting or biting from the animals.

Typical activities performed while an animal is safely immobilized include - *branding, hoof trimming, vaccination, grooming & shearing, castration, treating Mastitis, ear tagging / tattoo, stitching wounds, treat prolapsed uterus, minor surgery, dehorning, face / mouth inspection, removing thorns/briars, placing a Bolus, put a lazy calf to cow, palpitation**, *artificial Insemination**, *embryo transfer**, *semen collection**. (*using the mini probe or ejaculator probe accessories)

Using the RAU IM2000 Immobilizer is quick and easy because it is designed to be portable, light and reliable. One person can easily load a chute, immobilize, treat and release an animal with no assistance other than the Immobilizer. Remove the probe and the animal immediately returns to its pre-immobilization state with no after effects.

In recent university studies and tests conducted under conditions controlled by a reproductive physiologist, the measurements and observations of demeanor, feed acceptance, vocalization, respiratory rate, pulse rate and body temperature – all of which are accurate indicators of pain, discomfort and stress - have clearly shown *no adverse effects* related to repeated stimuli from the probe and are an accurate representation and a good indicator of the results that can be expected when using the RAU IM 2000 Animal Immobilizer.

With over 10 years in the marketplace and a worldwide user base, the RAU IM 2000 Animal Immobilizer has earned its spurs through solid performance & reliability, excellent design, quality construction and excellent service provided by I & G Distributors USA in Atlanta Ga. who build the units and back the 3 year warranty.

This product offers extremely good value for money with a very quick payback from real cost savings and value adding opportunities in the workplace.

If you haven't tried this safer, more cost effective, less stressful way of working cattle – perhaps now is the time.
